

J-Wand® Advantage

Features:

- The patented J-Wand is a single patient use intubating stylet featuring an oxygen port and a quick release handle.
- Supports direct laryngoscopy or video laryngoscopy by providing rigid support inside the endotracheal tube.

• The unique port design allows direct oxygen delivery and supports apneic oxygenation (AO) techniques.

• Available across all care settings for airway management including Anesthesia, Emergency Departments, Intensive Care Units, EMS services, and all non-hospital settings where proper airway management is paramount.

Disposable Single Use Stylet for Infection Prevention

The disposable J-Wand eliminates the risk of cross contamination that can occur in reprocessing reusable devices.

FDA's Reprocessing of Reusable Medical Device ¹

Inadequate cleaning between patient uses can result in the retention of blood, tissue and other biological debris in certain types of reusable medical devices. This debris can allow microbes to survive the subsequent disinfection or sterilization process, which could then lead to Healthcare-Associated Infections (HAIs).

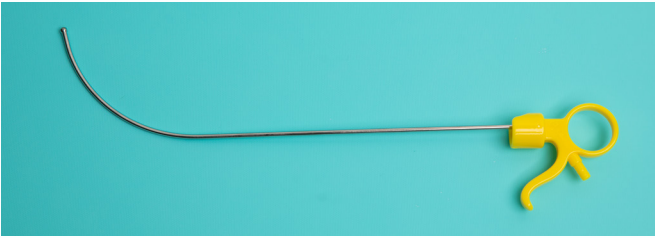

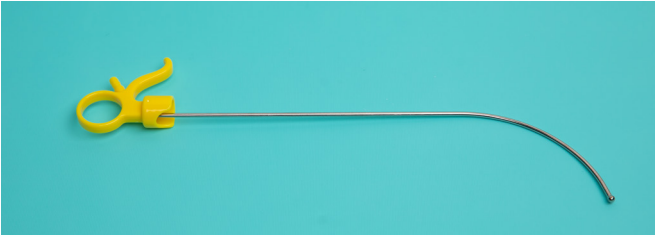

Supports Apneic Oxygenation (AO) Techniques ^{2,3}

Hypoxemia is a common complication during intubation. The J-Wand features an oxygenation port which allows oxygen delivery to patients during periods of apnea.
